SUMMARY

Computer Science undergraduate specializing in IoT, Cybersecurity, and Blockchain, focused on software engineering and security-aware application development. Skilled in Java, Python, and SQL, with hands-on experience in penetration testing, REST APIs, and building AI-driven systems. Currently exploring AI security with a focus on defending LLMs against prompt injection. Looking to bring rigor and ownership to a Software Engineering role with a security focus.

EDUCATION

Bachelor of Engineering - Computer Science and Engineering (ICB)

2023 – 2027

KS Institute of Technology, Bengaluru | VTU | CGPA: 9.1/10

TECHNICAL SKILLS

Programming: Java, Python, JavaScript, SQL

Frameworks & Cloud: Flask, REST APIs, MongoDB, OpenCV, Scikit-learn, Git/GitHub, Docker (Basic), AWS

Cybersecurity: OWASP, Vulnerability Assessment, Android Penetration Testing, Network Security, Ethical Hacking

INTERNSHIP EXPERIENCE

Cybersecurity & Ethical Hacking Intern – Coincent

OWASP, Network Security, Vulnerability

- Performed Android application penetration testing on a vulnerable banking app.
- Intercepted network traffic to expose cleartext credential transmission, decompiled the APK to extract a hardcoded AES key, and bypassed authentication via request tampering.

RESEARCH & PUBLICATIONS

A Survey on Prompt Injection and Jailbreak Defenses in Large Language Models *Published, (IJARCCE), May-2026*

- Classified prompt injection and jailbreak attack types, analyzed existing defenses, and identified gaps such as missing multi-turn context awareness and unified risk scoring.

ACADEMIC PROJECTS

Adaptive Semantic Defense for LLM Prompt Injection Attacks

Sentence Transformers, Scikit-learn [In-Progress]

- Built a dual-layer semantic defense system to detect direct and indirect LLM prompt injection attacks using semantic and heuristic analysis.
- Developed an Input Guard and Unified Scorer combining prompt risk, document risk, and Intent Divergence to classify inputs as SAFE, WARN, or BLOCK.

Real-Time Sign Language Translation System

Python, OpenCV, MediaPipe

- Built a real-time Indian Sign Language recognition system using OpenCV and MediaPipe Hands, achieving 85% gesture classification accuracy.
- Developed a Flask-based translation pipeline from ISL to English to regional languages with Hindi, Kannada, Tamil, and Telugu voice output.

Campus Safety & Alert Management System

JavaScript, MongoDB, HTML/CSS

- Developed a centralized web application to streamline campus security reporting, emergency alerts, and incident tracking.
- Implemented RESTful API endpoints for user authentication, real-time alert dispatch, and structured database storage.

CERTIFICATIONS

- Cloud Institution** – AWS Practitioner
- Microsoft Certified** – Security, Compliance, and Identity Fundamentals (SC-900)
- Coursera** – Fundamentals Of CyberSecurity, Machine Learning, SQL Fundamentals
